WHAT IS CULTURALLY RESPONSIVE EDUCATION?

NMSI’s definition of Culturally Responsive Education echoes the work of Geneva Gay and Zaretta Hammond. Culturally responsive education is using students’ “cultural knowledge, prior experiences, frames of reference and performance styles to make learning encounters more relevant and effective for them.” We conceive “culture” as the lens through which each individual views the world, a lens impacted by the intersectionality of their identity components (including, but not limited to race, ethnicity, religion, socio-economic class, gender and sexuality) and their lived experiences.

We believe that all students are complex and knowledgeable, carrying with them meaningful past experiences that should inform their classroom experiences. We believe Hammond’s claim of culturally responsive education is a pedagogical approach firmly rooted in learning theory and cognitive science and resonate with her focus on relationships among students, teachers and communities as cornerstones in this work.

We believe that teachers and educators must aim to provide all students with the scaffolds that “promote effective information processing” and build students’ “intellective capacity,” ensuring that they become increasingly independent learners with strong higher-order thinking skills.
EXPLICIT ACTIVATION OF AND CONNECTING TO PRIOR KNOWLEDGE OR STUDENT EXPERIENCES

DESCRIPTION
Teach new concepts to students by building from their previous knowledge or experiences, so students can see the connections to the new material easily.

WHY USE IT
Building from prior knowledge allows students to make better sense of the new – but related – information.

Valuing students’ experiences creates an inclusive classroom culture and establishes a community of learners.

WHEN TO USE THIS METHOD
The beginning of a lesson or activity! Learning new information can be confusing for some students, but connecting fresh content with previous experiences makes it easier to process what they learned.

**VISIBLE OR AUDIBLE THINKING**

**DESCRIPTION**
Solving problems takes a series of steps, but those steps can look different for every student. Learn to “see” what students are thinking and have them annotate a text or document their thought process to a math problem. During a one-on-one or small group intervention, ask students to verbalize their problem-solving steps. Example questions to ask:

- What steps have you taken so far?
- Tell me what you need to do here?
- Can you explain your thinking on this question?
- How did you get here?

**WHY USE IT**
Teachers can identify strengths and gaps more clearly and meet students where they are in their learning.

Teachers can avoid the error of doing the thinking for students.

Reflecting on their thought process positions students on a pathway to become independent learners.

Placing value on the process of learning is as important as arriving at the “right” answers.

**WHEN TO USE THIS METHOD**
Use this strategy after introducing new material and as a means to gauge how deeply students understand a concept or idea. Possible methods include:

- Annotating a text
- Completing graphic organizers
- Documenting all steps for problem-solving
- Providing rationales for answer choices
- Group discussions
- Affinity mapping
- Mind mapping
**DESCRIPTION**

Metacognition is a fancy word for “thinking about thinking.” Applying this practice guides students to identify what they know, what they need to know, how they learn and how to measure progress in their learning.

**WHY USE IT**

Metacognitive practices help students build a habit of examining their learning to develop strategies for learning gaps.

Metacognitive habits facilitate student independence by adapting to new situations with more confidence.

Incorporating metacognitive moments in the classroom allows students to take ownership over their learning, thus creating a learning partnership between the teacher and student.

**WHEN TO USE THIS METHOD**

Make metacognitive thinking a habit during classroom and individual learning. Set aside time for students to reflect on what or how they learn and pose questions that guide their thinking about thinking. Many teachers practice this in the form of an exit ticket, which can determine additional learning needs.

WRITING FOR AUTHENTIC AUDIENCES

DESCRIPTION
Strengthen students’ writing skills by having them write for authentic audiences. For example, assign students to critique young adult books on Amazon, design environmental preservation posters for the school hallway or create a podcast explaining a scientific phenomenon. These assignments emphasize student voices and position them as agents of change in and outside of the school.

WHY USE IT
Writing for real audiences creates authenticity and meaning to school work, which builds student engagement.

Removing the line between school and community creates a genuine experience of the ‘real’ world.

Writing for an authentic audience is a critical skill to succeed in AP® English and helps students become more independent analyzers of rhetoric beyond high school.

WHEN TO USE THIS METHOD
As often as possible! Many teachers use this type of assignment as a culminating assessment.

COMMUNAL TALK AND TASK STRUCTURES

DESCRIPTION
This method guides students to learn from each other through structured discussion and collaboration.

Whether it’s in a small group, in pairs or a whole-class discussion, students can gain new perspectives through other students’ experiences.

WHY USE IT
Discussing ideas and working together establishes a collaborative and communal space built on learning. See think-pair-share activity on page 9.

Adopting a structured discussion, such as a debate, gives students a purpose to collaborate and makes the conversations more deliberate.

WHEN TO USE THIS METHOD
Communal talk and tasks structures can be used any time during a lesson. Whether students are grappling with a new concept or applying their understanding of a new concept to use, structured conversations reinforces students’ learning and promotes social growth.

POPSICLE STICKS

DESCRIPTION
Popsicle sticks is a discussion activity tool that minimizes teacher bias. How it works:

1. Ask each student to write their name on a popsicle stick during class
2. Collect all the sticks
3. When posing a question to the whole class, pull a popsicle stick at random instead of asking for a show of hands, so students are called upon equally!

WHY USE IT
Research suggests that teachers are likely to call on students they perceive as struggling for only low-level answers. This discussion tool ensures equitable participation and removes potential bias.

WHEN TO USE THIS METHOD
Popsicle sticks are ideal for asking a student’s opinion during a group discussion or reviewing previously learned material. Best of all, the popsicle stick method removes potential bias and engages with randomly selected students.
Think-pair-share is an activity involving written and verbal collaborative work that promotes engaging meaningful conversations amongst students. How it works:

1. Ask students to respond a question by writing down their thoughts
2. Pair students up and share their responses
3. Finally, each pair will share their findings in table groups or with the entire class

Why use it
This type of collaborative work promotes confidence, gets everyone in class to participate and supports thoughtful discussions.

When to use this method
There are several ways to incorporate think-pair-share.

- Tap into students’ previous knowledge before introducing new material
- Gauge students’ reaction after watching an educational film
- Gauge students’ understanding after reading a short text
- Gather ideas or formalize procedures before students begin an assignment (essay, lab or a set of word problems)
